Markets

CRE market environment remains highly competitive and challenging, low interest rate policy of ECB ongoing

- CRE market environment remains highly competitive – fundamentals for most Continental European markets still solid; soft indicators somewhat weaker
 - Transaction volumes remained on elevated level, even though having declined recently
 - Most property yields continued to offer high pickup on 10-year government bond yields, especially after soft ECB interest rate outlook, supporting and prolonging relative attractiveness of CRE markets (long cycle)
 - Some markets with still increasing rents and cash-flows
 - UK rental development mainly stable
 - Retail rents may come under further pressure and are already declining in UK
 - Vacancies remain on low levels in Continental Europe and UK markets; share of co-working space still high

- pbb remains cautious and highly selective, especially on
 - UK in most property types
 - Retail (structural change / online business)

- Coverage ratio:
 - Stage 3 coverage ratio¹ slightly up at 19% (12/18: 18%)

Financial reporting

Change in definition of key ratios and segment allocation in 2018

CIR

- New calculation method of CIR as a result of new P&L structure:
 - In principal, continuation of past structure
 - Better reflection of operating efficiency
 - Esp. bank levy and similar dues no longer included

$$\text{CIR} = \frac{\text{General admin. Expenses} + \text{Net income from write-downs and write-ups on non-financial assets}}{\text{Operating income}}$$

Coverage Ratio

- Replacement of IAS 39 Incurred Loss Model by IFRS9 Expected Credit Loss Model with 3 stage logic:
 - Stage 1: impaired with 1 year expected credit loss
 - Stage 2 and 3: impaired with lifetime expected credit loss
- Coverage ratio does not take into account additional collateral

$$\text{Coverage ratio} = \frac{\text{Credit loss allowances on financial assets in stage 3}}{\text{Gross book values in stage 3 (loans and securities)}}$$

Segment Reporting

- New approach better reflects operating profitability of the segments

Major effects:

- Prepayment fees now allocated on single deal level
- Costs of liquidity buffer no longer calculated on portfolio level
- Equity now allocated according to going concern view instead of liquidation approach

RoE

- Adjustment of RoE calculation after AT1-issuance (Q2/18 onwards only)

$$\text{Return on equity} = \frac{\text{Annualised profit} - \text{accrued (pro-rata) AT1 coupon (before/after tax)}}{\text{Ø Shareholders equity}^1 \text{ (excl. AT1)}}$$

¹ Excl. other comprehensive income from cash flow hedge accounting and from financial assets at fair value through other comprehensive income (IAS 39: AfS reserve)
